快速对频入门

为了使你的无线系统正常运行，无线手持麦克风和功放主机必须设置相同的工作频率。

设置主机：

- 一般的设置经验是主机和话筒保持在共同可见的视线范围之内，主机天线垂直放置。
- 将电源线与主机进行连接，打开面板电源开关。
- 使用标准的音箱接线柱将主机的输出与无源音箱进行连接。
- 在主界面，按下MICA/MIC B按键进入麦克风接收器设置屏幕，通过旋转编码器来改变频率，短按SYNC按键进行对频设置。

设置无线手持麦克风：

- 插入两节AA电池到无线麦克风，按下电源按钮打开无线麦克风电源。
- 主机前面板发射窗口与无线话筒下面的红外接收窗口相对，距离保持在15 - 30厘米。
- 在与主机对频时，屏幕框中进度条会闪烁，此时看到无线麦屏幕亮起，检查无线麦屏幕和主机上频道一致，即为对频成功。
- 同时长按主机面板上面EDIT编码器，回到主页面，或者等待10秒钟自动退出。

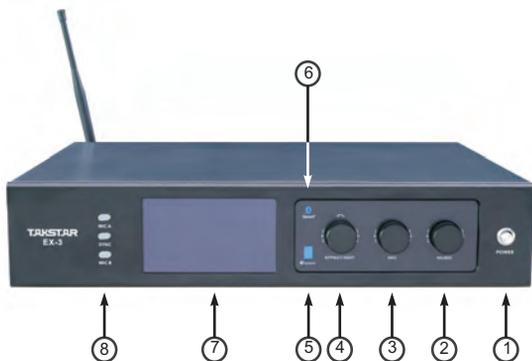

电平设置：

- 对着麦克风讲话或唱歌，或者你使用麦克风连接乐器，它是在正常的电平，慢慢的调节面板的音量以达到你想要的电平。
- 如果你发现系统有显示的断频或突发的噪声，或许是有其它频率的干扰，请按上面的步骤改变系统的频道。或者检查天线是否正确安装。

■ Quick Introduction to Frequency Matching

To make your wireless system work normally, the wireless handheld microphones and the power amplifier must be set to the same operating frequency.

Main Unit Settings:

- The general setup method is that the main unit and microphones are kept within sight and the antenna is placed vertically.
- Connect the power cord to the main unit and turn on the panel power switch.
- Use standard speaker binding posts to connect the outputs of the main unit to passive speakers.
- In the main interface, press the MIC A/MIC B button to enter the microphone receiver setting screen, rotate the encoder to change the frequency, and press the SYNC button to set the frequency.

Wireless Handheld Microphone Settings:

- Insert two AA batteries into the wireless microphone and press the power button to turn it on.
- The emitting window on the front panel of the main unit should be placed opposite to the infrared receiving window on the wireless microphone, and the distance should be kept at 15-30 cm.
- When the microphone is pairing with the main unit, the progress bar on the main unit screen will flash, and the wireless microphone screen will light up. When the channel on the wireless microphone screen is the same as that on the main unit screen, the pairing is successful.
- Long press the EDIT encoder on the panel to return to the main interface, or wait 10 seconds

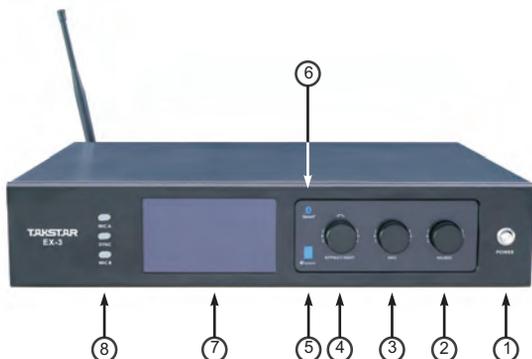

Level Settings:

- When speaking or singing into the microphone, or using the microphone to connect to an instrument, it is at a normal level. Slowly adjust the volume of the panel to reach the level you want.
- If you find that the system shows frequency interruption or burst noise, it may be due to interference from other frequencies. Please follow the steps above to change the channel of the system, or check whether the antenna is installed correctly.

III Microphone Processing Interface

1. The adjustment area of PEQ curve: Adjust the frequency and gain parameters by dragging the frequency point (small dot), and change the frequency of the low cut point by dragging the small square. Click "Show all EQ parameters" to display the frequency, gain, and bandwidth parameters of all PEQ points, and click "EQ reset" to restore all PEQ parameters to factory default.
2. The display area of PEQ parameters: You can manually input data to change the frequency, Q value and gain of the corresponding frequency point. Filter types (low shelf, high shelf, low cut, high cut) and bypass function keys are available.
3. The PEQ parameter slider can change the currently selected PEQ parameters (frequency, bandwidth, gain).
4. The low-cut frequency of the microphone can be adjusted. The low-cut filter types of BUTTERWORTH-6dB--24dB/ BESSEL-6dB--24dB/LINK-12dB--24dB and a bypass function key are available.
5. There are six levels of feedback suppression. Press the "Off" button to turn off the feedback suppression function.
6. The independent input volumes of 4 microphones can be adjusted.
7. The noise gate function of MIC input can be turned on and off.

IV Effect Processing Interface

1. Independent processing of the PEQ parameters of echo and reverb: Adjust the frequency and gain parameters by dragging the frequency point (small dot). Click "Show all EQ parameters" to display the frequency, gain, and bandwidth parameters of all PEQ points, and click "EQ reset" to restore all PEQ parameters to factory default.
2. The display area of PEQ parameters: You can manually input data to change the frequency, Q value and gain of the corresponding frequency point. Filter types (low shelf, high shelf, low cut, high cut) and bypass function keys are available.
3. The PEQ parameter slider can change the currently selected PEQ parameters (frequency, bandwidth, gain).
4. There are mono and stereo options for echo. Mono and stereo are two different echo effects. In the mono state, only one delay and one repetition parameter can be adjusted; in the stereo state, the left and right delay and repetition parameters can be adjusted separately, so is the pre-delay of echo.
5. The volume, time, pre-delay, space, high cut and low cut of the reverb can be adjusted.
6. The direct sound parameters of the effect can be adjusted.
7. The total effect volume can be controlled.
