■ Correct Operation

For safe and comfortable operation, please read carefully and abide by the following items:

1. To avoid hearing loss, set the volume of the player to minimum before connecting the headset. After putting the earphone on, increase the volume to a proper level. Noise is measured in decibels (dB). Any outside noise of 85 decibels or more will cause gradual hearing loss.

2. Please pay attention to your operation habits! Volume and time are directly and inversely proportional to hearing loss. The louder the volume, the shorter the time you listen; the more comfortable the volume is, the longer the time you listen.

Listen high volume sound will cause damage to your hearing.

This dB table lists the comparison of some normal sounds and the potential hurt level to your hearing:

| Sound Source | Noise Level | Consequence on Hearing |
|--|-------------|---|
| whisper | 30dB | very quiet |
| quiet office | 50-60dB | comfortable hearing level is below 60dB |
| vacuum cleaner/ hair drier | 70dB | It has some invasion and interference to the telephone talking |
| food processor | 85-90dB | 85dB (continuously 8 hours) is the level to hurt the hearing |
| garbage cleaning machine or cement mixer | 100dB | It is recommended to hear the sound of 90-100dB for less than 15 minutes |
| electric motor saw/ electric drill | 110dB | Hearing the sound over 100dB without any protective measure leads to permanent hearing loss |
| rock & roll concert (it depends) | 110-140dB | The painful hearing threshold is about 120dB |

■ Maintenance

- 1.The rated power of headphone is 100mW. Please do not operate it at overload status to avoid headphone (or earphone) damage.
- 2.Please keep the headphone (or earphone) in dry and clean environment. During operation, prevent the headphone (or earphone) from water entering into it or dropping or colliding to avoid damage.
