### Application

PC, MAC, PS4™, Xbox One and mobile equipment

#### ■ System Requirement

windows7 or more advanced version. OS X 10.9 or more advanced version (using 7.1 audio control)

#### Specification

- Unit Type: dynamic
- Unit Diameter: Ø53mm
- Unit Impedance: 60Ω±15%
- Headphone Frequency Response: 20Hz-20kHz Headphone Sensitivity: 103±3dB at 1KHz
- Microphone Sensitivity: -42±3dB(0db=1V/Pa/m at 1kHz)
- Rated Power: 100mW
- Peak Power: 250mW
- Connection: 7.1 audio control or Ø3.5mm 4pin connector
- Headset Cable:: Ø4mmx1.2m
- 7.1 Audio Control Cable: Ø4mmx2m
- Net Weight: about 255g
- Note: the above data is obtained from the test of Takstar laboratory, and has the final interpretation right!

#### ■ Operation Instruction

#### 1. Function

- ① Volume + ② 7.1 virtual sound switch ③ Volume -
- ⑤ Microphone switch ① Headset plug
  - ® Detachable microphone

# RISE Gaming headset

#### 2.Plug In/Out Microphone

- Push the cover upward to open the microphone connector to plug in
- Unplug the microphone, and push the cover to outside to close the microphone connector.

#### 3.Connection 1)Mobile Connection

Note:Compatible with the equipment of CTIA standard connector.

# RISE Gaming headset

#### 2) PC/Mac connection

nect headset with PC USB interface Note: The USB interface should be high power interface (USB2.0 or more advanced).

#### 3) PS4<sup>™</sup>Connection

Note: setup ► peripheral equipment ► sound device ► output to headphone ► all sound ► setup ► equipment ► audio equipment ► output to headphone ► select all audio

# RISE Gaming headset

#### 4)Xbox One Connection

Note: Xbox One has no 3.5mm connector and needs Xbox One headphone adapter.

### Correct Operation

For safe and comfortable operation, please read carefully and abide by the following

- 1.To avoid hearing loss, set the volume of the player to minimum before connecting the headset. After putting the earphone on, increase the volume to a proper level. Noise is measured in decibels (dB). Any outside noise of 85 decibels or more will cause gradual hearing loss.
- 2.Please pay attention to your operation habits! Volume and time are directly and inversely proportional to hearing loss. The louder the volume, the shorter the time you listen; the more comfortable the volume is, the longer the time you listen. Listen high volume sound will cause damage to your hearing.
- This dB table lists the comparison of some normal sounds and the potential hurt level to your hearing:

Sound Source	Noise Level	Consequence on Hearing
whisper	30dB	very quiet
quiet office	50-60dB	comfortable hearing level is below 60dB
vacuum cleaner/ hair drier	70dB	It has some invasion and interference to the telephone talking
food processor	85-90dB	85dB (continuously 8 hours) is the level to hurt the hearing
garbage cleaning machine or cement mixer	100dB	It is recommended to hear the sound of 90-100dB for less than 15 minutes
electric motor saw/ electric drill	110dB	Hearing the sound over 100dB without any protective measure leads to permanent hearing loss
rock & roll concert (it depends)	110-140dB	The painful hearing threshold is about 120dB

The average person can hear the music safely at 70% volume for 4.6 hours every day. It is very important to know the volume and time when hearing music. Use your equipment sufficiently at safe volume level to enjoy the outstanding sound performance.
